Topic: Experience report: Building a hybrid cloud using docker/mesos/consul

Description: We just implemented a private fully self service SaaS cloud based on docker/mesos/consul. The platform can run any docker container and spans our physical DC as well as the clouds. It provides a standard ecosystem for our applications allowing the engeneirs to run their work loads seamlessly across the globe. We built tooling that brings Unix like feel to managing the app services. And at the moment we are extending the tool/automation layer to also utilize ECS and kubes. I will present the platform and go over what we got off the shelf and what we had to build and why. As well as well as workflows, architectural design and deployment demos.

Thanks to our sponsor, Third Republic, for this month's pizza, drinks, and beer!
