Details

Creating automated end-to-end functional acceptance tests is hard. Maintaining them over time is harder. Some agilistas even claim that the cost outweighs the benefit. In this lecture we present five principles for creating valuable, maintainable acceptance test suites. We

discuss practices such as layering acceptance tests to reduce coupling between the test harness, and talk about how teams should be organized in order to efficiently manage acceptance test driven development. The core of the talk discusses how to manage the evolution of acceptance tests by organizing them as scenarios rather than as suites of story tests. Finally we show how to manage data for acceptance tests.

Jez Humble is a vice president at Chef, a lecturer at UC Berkeley, and co-author of the Jolt Award winning Continuous Delivery, published in Martin Fowler's Signature Series (Addison Wesley, 2010), and the forthcoming Lean Enterprise, in Eric Ries' Lean series. He has worked as a software developer, product manager, consultant and trainer across a wide variety of domains and technologies. His focus is on helping organizations deliver valuable, high-quality software frequently and reliably through implementing effective engineering practices.
