Details

Companies like Netflix, Google and Amazon are leading the way with Continuous Delivery. Most of us don't work in a company like them. We don't have a simian army. We don't have a canary testing process. Working out where to start can feel overwhelming.

This talk will provide simple tips and tricks for improving delivery without investing lots of time up front creating complex deployment frameworks.

Culture and process is as important as tools and automation. This talk will give real-world examples of introducing the principles and practises of Continuous Delivery to existing teams and some of the difficulties encountered along the way

WED, DEC 3 · 7:00 PM EST

Lisa Van Gelder - Continuous Delivery for the rest of us

Past event

deliver software solutions, improve their software development process, and speed up delivery. She is passionate about building teams and enabling them to reach their full potential. Lisa has over 15 years experience in software engineering, including leading and managing software development teams. Her career has taken her between London and New York at companies ranging from small startups to large media organizations - including the Guardian and the BBC. @techbint

...

Great presentation - thanks so much, have already presented to my team. Will be useful for obtaining support for automation and improving our overall delivery pipeline. Thanks again!

...

Thank you @Lisa for a very helpful talk. Today I asked my team to think about our app specific metrics. One quick question I didn't get to ask, did I rightly hear you say you want the CI tests to run locally on devs' machines? Maybe I misheard. Elsewhere I've seen plugins where the build will advise the IDE of build/CI green lighting, but the build runs remotely.

...

Yes - ideally you want developers to be able to run the full test suite on their own machines before checking in, and then CI kicks in from there.
