Details

MongoDB makes ops a breeze... if you do it the right way.

In this session, Mike will walk through best practices for MongoDB production configurations. He'll work through several model operational scenarios, covering maintenance tasks, backups, recovery processes, and performance monitoring.

We'll also cover design patterns that have been seen in the wild, and discuss hardware deployment considerations.

About the speaker:

Michael A. Fiedler has been keeping systems running for over 16 years at a variety of companies ranging from finance, to web tech, to education and advertising.

In that time, he has been exposed to a wide variety of scenarios and considers learning how to deal with problems more fun than avoiding them. He is a licensed skydiver and certified roller derby referee.
